

# SCADA/HMI

## Yukon Visual T&D

**Reliably** and **cost-effectively** modernize your substation with the leader in the field of enterprise automation solutions which is **Field-tested at up to 10,000 transitions per second**

EATON brings SCADA/HMI to the next level as a substation historian with a completely **advance datalog feature** based on standard **world-class database engines**

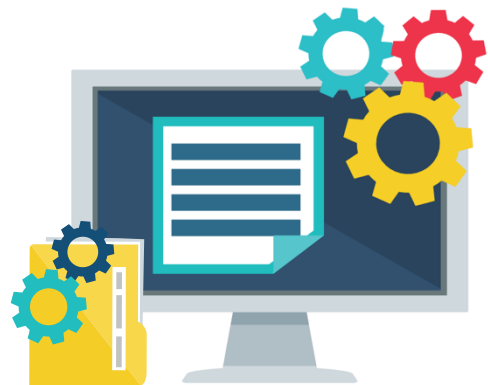

Connect to industry-standard **OPC servers**, including **DNP3** and **IEC 60870-5-101/104** OPC servers

Visual T&D is designed to be **easy to set up** and **reduce engineering, maintenance** and commissioning efforts.

**Trending Views** plots the value of any data point in real-time.

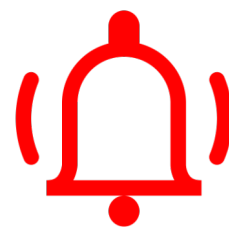

A **Vendor Independent** that provide access to a large variety of devices using standard or **proprietary protocols**

**Directly communicate with devices** using TCP/IP or serial ports

Use the **built-in report generator** to create

**Automatically retrieves event files**

**Logs all events, alarms, operator actions** and all transitions on all data points in a **high-performance historian**

Comprehensive **alarm and event processing**

**Notify users of significant alarms** and events

Provides **immediate access** to all data points, **in real-time**, in a variety of formats, with **minimum configuration effort**

**Millisecond time tagging**
